

# Metalastik® type HT Cushyfloat™

## Features/Application

The HT Cushyfloat™ (High Thrust) Mounting has been developed to meet the increased torque output and higher thrust load requirements of many modern marine power units. By careful design of the rubber section, relatively high degrees of flexibility in the vertical and lateral modes are combined with high stiffness in the longitudinal fore and aft direction, thereby affording good vibration isolation properties and minimum movement under thrust forces.

The design incorporates bump and rebound control features which limit excessive movements under shock loading. The mountings have a high inbuilt tensile strength which renders them very suitable for the suspension of power units in lifeboat applications.

The top metal cover gives protection against oil contamination and the protective finish resists corrosion attack. Two basic designs and different rubber compounds allow loads between 85 and 1070 kg to be accommodated.

All dimensions in mm

Product No.	Weight kg	Rubber Hardness	Kv static (kN/mm)	Kv dync. (kN/mm)	Max Vertical Load (kN)	Max Comp'n (mm)	Min Vertical Load (kN)	Min Comp'n (mm)
17-1990	6.2	45	1.6	1.85	5.6	4	1.47	1
17-1990		60	3.0	3.9	10.5	4	2.9	1
17-2182	3.4	35	0.4	0.42	1.37	5	0.83	3
17-2182		45	0.57	0.66	2.05	5	1.23	3
17-2182		55	0.96	1.2	3.33	5	2.00	3
17-2182		65	1.53	2.06	4.9	5	2.95	3

## Nominal Stiffness Ratios

Product No.	Vertical Kv	Athwartship K lat	Fore & Aft K long
17-1990	1	0.25	9
17-2182	1	0.85	6

Note! For marine applications, maximum loads quoted refer to combined static and continuous torque generated forces. Data given overleaf shows variation in fore and aft stiffness depending on vertical loading. When horizontal forces due to propeller thrust are present, vertical loads should be reduced and our Marine Application Department consulted for advice.
