

Two Bolt Instrumountings™

Features

These mountings are high quality products capable of protecting light equipment from vibration and shock. Two Bolt Instrumountings are available in either 45° or 60° IRH natural rubber compound. Similar to Rectangular SAW™ Mountings and Circular SAW™ Mountings, Two Bolt Instrumountings™ can be assembled in a 'Vee' arrangement for good stability and improved vibration isolation.

- ▼ Circular or hexagonal end plates for simple fitting.
- ▼ Can take up to 3 times rated load under shock conditions.
- ▼ Takes load in either shear or compression, or a combination.
- ▼ Fixing bolts threaded to within 2 pitches of the end plate.
- ▼ Up to 12 mm deflection in shear for a very soft suspension.
- ▼ Top quality bond strength for reliability and safety.

Metalastik® type Two Bolt Instrumountings™

Two Bolt Instrumountings provide a convenient and effective means of isolating vibration generated by light-weight machinery. Also used to protect instruments and light equipment from vibration and shock. They may be loaded in compression or shear depending on application requirements.

Typical applications:

- ▼ Instrument panels
- ▼ Electronic equipment
- ▼ Lightweight laboratory machines

Drawing no.	Part no.	Dimensions in mm			L	Max Load in Compression (Kg)	Max Load in Shear (Kg)	Weight (Kg)
		D	H	G

Two Bolt Instrumountings™

Note: The natural frequencies and degrees of isolation are based on dynamic characteristics of the mountings.

Load per mounting (kg)

Horizontal vibration Vertical load

Vertical vibration Vertical load

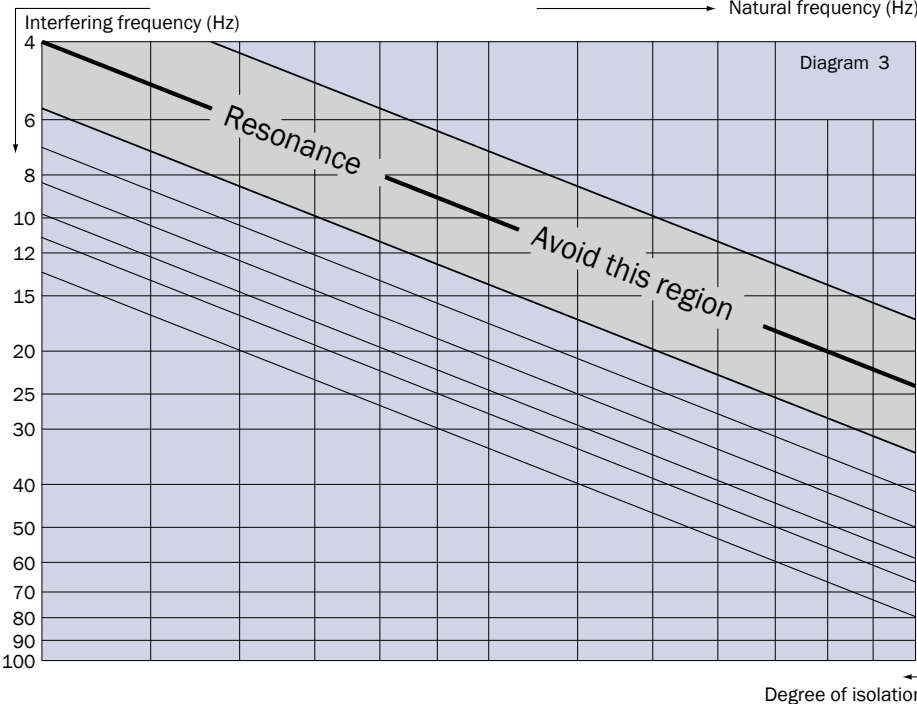

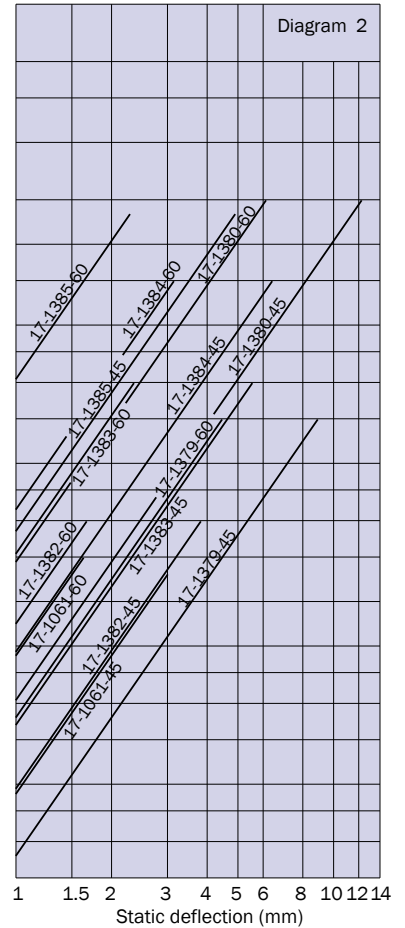

To select correct mounting, following data are needed:
 1) Load per mounting (kg)
 2) Interfering frequency (Hz) (Hz = rpm / 60)
 Select correct load line in diagram 1 and correct interference line in diagram 3. The load line intersects with required type of mounting. Connect this intersection point vertically down to the interference line in diagram 3. Here, on the sloping curve, the isolation degree is indicated. For static deflection, see diagram 2.
