

## Evolu series

### EVOLU 600 SERIES

As a leading vibration isolation specialist, Trelleborg Antivibration Solutions has developed a wide range of heavy duty conical vibration isolators: the Evolu 600 series. Designed for heavy marine and machinery applications, these isolators ensure an optimal solution under the most demanding circumstances.

Developed using carefully selected materials and expert knowledge in polymer engineering, our extensive range of antivibration mounts have been carefully designed to remove unwanted vibration and noise for key industries across the globe. With over 100 years experience in delivering the highest quality products to market, you can be confident that we'll deliver a solution that you can rely on.

All isolators in the Evolu 600 series are made of high-quality natural rubber and capable of handle both vertical and horizontal forces. Each isolator is available in various types and stiffness grades. Characterized by high maximum marine loads, various type approvals, and easy installation, Evolu vibration isolators offer the best value for money.

### CHARACTERISTICS

- High level of vibration and sound isolation
- Suitable for a range of applications
- Easily fitted

## Evolo 611 Grade A-D

### APPLICATION

Optimum vibration isolation for a wide range of applications.  
For smaller, light-weighted equipment that needs optimal vibration isolation at both high and low frequencies, such as generator sets, pumps, small diesel engines, compressor units, ventilators, measuring equipment, etc.

### MATERIAL

Rubber part: Highest quality natural rubber  
Metal: Aluminum

### IDENTIFICATION

The type is marked in the mounting plate

### ADVANTAGES

- Approved by Lloyd's Register
- Optimum vibration isolation
- Easy and quick installation
- Build in end-limiter to protect against overload
- Capable of handling both vertical and horizontal forces
- Natural rubber gives maximum vibration isolation
- One type fits all weights between 50 and 400 kg
- Stock item.

### INTRODUCTION

The innovative Trelleborg EvoLo 633 TwistLock for modular and skid based units solve the vibration issues causing potential damage and noise in the units, while the flexibility and easy handling of the TwistLock is maintained.

Personnel on offshore platforms are often facing vibration challenges caused by modular and skid based units. These vibrations are transmitted throughout the steel structure and may result in unforeseen damage or failure. Additionally, these vibrations affect the living and working environments of offshore workers. Eventually, this will negatively affect production, as poor working conditions often lead to inefficiency, a decrease of morale on the platform, and noncompliance with working conditions and safety regulation.

Trelleborg already successfully applied her innovative EvoLo vibration mounts in various market segments. In the offshore industry, many permanent offshore units are isolated against vibration with the EvoLo 633. However, the standard EvoLo 633 vibration mount can not be used in this case, as modular and skid based units must be secured safely whilst their deployment remains flexible. The EvoLo 633 TwistLock is the result of the combination of our vibration isolation expertise, high-quality products, and innovative capabilities. It has all the benefits of easy and quick installation of the TwistLock widely used in the offshore market, combined with the perfect vibration isolation qualities of the EvoLo 633 vibration mount. It is the ideal vibration isolator for modular and skid based units, as it protects the offshore unit from dangerous and annoying vibrations coming through and from the platform.

Trelleborg's EvoLo 633 TwistLock improves safety by preventing the unit and structure from hazardous and inconvenient vibrations. Additionally, it substantially increases working and living conditions on the offshore platform similar to our solutions for permanent offshore units. The business benefits are legion: increased efficiency, improved morale, and compliance with offshore working conditions and safety regulation.

### MATERIAL

Rubber part: Highest quality natural rubber  
 Metal: Steel (St. 37 electrolytic galvanized)

### IDENTIFICATION

The type is marked in TAG/ Identification.

### ADVANTAGES

- Type approvals available on request
- Optimum vibration isolation
